High Protein Vegetarian Meals @ SDSU

Amanda Nazario, MS, RDN

What is Protein?

Protein is a vital nutrient made of amino acids that helps build and repair body tissues like muscles and organs.

Animal sources include meat, fish, eggs, and dairy products.

Plant-based sources include beans, lentils, tofu, nuts, seeds, and whole grains.

Why is Protein Important?

Builds & repairs muscles – essential for growth & recovery

Supports immune function – helps make antibodies & enzymes

Keeps you full longer – aids in appetite control & weight management

Supports skin, hair, & nails — vital for body tissue upkeep

How Much Protein do I Need Every Day?

The amount of protein you need daily depends on your age, gender, and activity level. On average, adults need about **0.8 grams of protein per kilogram** of body weight (roughly 0.36 grams per pound). Active individuals or athletes may need **1.2 to 2.0 grams per kilogram** to support muscle repair and growth.

Starbucks

Location: Multiple Campus Locations
